

Healthy HARDWARE[®]
BY TRIMCO

- Healthy Hardware[®] bactericidal copper alloy surface that is proven to kill 99.9% of the most infectious bacteria* in 2 hours or less.
- Not a coating and won't wear off!
- Continues to kill bacteria for the lifetime of the product - 24/7!
- Looks like stainless steel to match other hardware products.
- Wide range of hardware and touch surfaces available.
- Made in the North America.
- Available in commonly used products like door pulls, hospital latches, push plates, exit device push pads, mortise lock levers and trim, and more.
- Common Hardware used in Healthcare, Education, Hospitality, Commercial, and Government Segments.

*Laboratory testing shows that, when cleaned regularly, uncoated copper alloy surfaces kill >99.9% of the following bacteria within 2 hours of exposure: MRSA, VRE, Staphylococcus aureus, Enterobacter aerogenes, Pseudomonas aeruginosa, and E. coli O157:H7. Copper surfaces are a supplement to and not a substitute for standard infection control practices and have been shown to reduce microbial contamination, but do not necessarily prevent cross contamination or infections; users must continue to follow all current infection control practices.
